

ANGELIKA MAZUREK

Product & AI UX Designer | Complex Systems & Human-in-the-Loop Workflows | Los Angeles, CA
angelika.a.mazurek@gmail.com | 424-428-9468 | [linkedin.com/in/angelmaz](https://www.linkedin.com/in/angelmaz) | github.com/angelmaz

Product & AI UX Designer bridging full-stack software engineering, clinical physiology, and human-in-the-loop AI validation. Experienced in designing desktop diagnostic software, physical hardware wayfinding, and mixed-initiative AI companion workflows. Combines deep behavioral empathy with technical and code fluency to build resilient, accessible, and high-throughput systems.

PROFESSIONAL EXPERIENCE

UX Designer – CheckCells, Inc. (2023–2026) | Los Angeles, CA

- Designed and shipped responsive laboratory software (SaMD) and high-density test queues for Point-of-Care semen analysis referenced against WHO 6th edition standards.
- Led hardware interaction ergonomics across 4 prototyping phases, introducing a manual focus calibration ring and etched multi-chamber spatial wayfinding (1–4).
- Established human-in-the-loop validation pipeline: labeled ~500 images/frames in Label Studio and benchmarked ground-truth counts to resolve debris misclassification.
- Collaborated with engineering to streamline image acquisition and cloud compute workflows, reducing end-to-end analysis latency from ~15 minutes to <1 minute.
- Authored visual instructions and workflow documentation for FDA Instructions for Use (IFU) and clinical lab operators.

Assistant Medical Director – “Nasza Klinika” (2016–2018) | Warsaw, Poland

- Analyzed operational clinical workflows and patient intake pipelines to streamline treatment delivery and interdisciplinary coordination.
- Built deep foundational understanding of accessibility, user friction, and varied patient capabilities in high-stakes environments.

Neurology Physiotherapist – “Bielanski” Hospital, Dept. of Neurology (2013–2016) | Warsaw, Poland

- Delivered patient-centered neurological rehabilitation, observing biomechanics, motor limitations, and human ergonomics daily.
- Facilitated medical student training sessions and cross-functional team communication.

SELECTED CASE STUDIES & PROJECTS

TaskApp - Cross-Platform Productivity & Usability Engineering (Google UX Certificate)

- Conducted user research, persona definition (dual-responsibility engineer), and end-to-end Figma screen topology mapping.
- Executed 2 rounds of usability testing (6 participants), resolving category discovery friction and optimizing thumb-zone touch targets.

MoodBridge 2.0 - Ethical Intelligence-Augmentation Companion (Stanford Online Capstone)

- Designed an AI emotional regulation system prioritizing human agency and decision fatigue reduction over prescriptive automation.
- Architected Mixed-Initiative Interaction model (1 daily micro-action with 3-way autonomy controls: Accept / Modify / Skip) and local-first privacy safeguards.

Flying Recipes – Full-Stack Application

- Designed and engineered full-stack web application (Python, Flask, PostgreSQL, JS) eliminating cognitive math load for European cooks in the US.
- Built real-time surface-area proportional baking pan scaling algorithm and mobile-first glanceable ingredient blocks.

EDUCATION & CERTIFICATIONS

Stanford Online – UI/UX Design for AI Products (2025)

Google UX Design Professional Certificate (in progress)

Hackbright Academy – Software Engineering Fellowship (2023)

MSc in Physiotherapy – Medical University of Bialystok (2008–2013)

SKILLS

UX & Interaction: Enterprise Dashboards, User Research, Usability Testing, Figma Design Systems, Paper Wireframing, Rapid Prototyping, Information Architecture.

AI & System UX: Human-in-the-Loop (HITL), Model Output Validation, Label Studio, Mixed-Initiative AI, Ethical AI Governance, Confidence Scoring.

Technical & Code: HTML5/CSS3, JavaScript, Python, Flask, PostgreSQL, Git/GitHub, developer-ready design specifications.

Domain Expertise: Medical Instrumentation (SaMD), Accessibility (WCAG), Clinical Workflows, Hardware Ergonomics & IFU.
